

Alice Buzzella

obtained in September 2015 a Master degree (110/110 cum laude) in Experimental and Applied Biology at University of Pavia with a research project aimed to studying dopaminergic stimulation following nigrostriatal lesion in an animal model of Parkinson's disease.

Since January 2016 she has been working as an intern at the Laboratory of Pharmacology led by Prof. Pastoris. She is involved in in vitro studies on the safety and efficacy of medical devices and cosmetics, in particular on the development of new and innovative tests for evaluating skin sensitization process.
